Testbericht moviefy

Test wurden am 06.02.2024 von Stefan Jovic, durchgeführt.

Login

| Registered user	jovic.stefan@gmx.net / 1234	Test passed
Registered user with wrong password	test@testemail.com / 1234 ERROR: Email or password is incorrect	Test passed
Registered user with wrong email	Jovic.stefan@gmx-wrong.net / 1234 ERROR: Email or password is incorrect	Test passed
Nonregistered user:	Test@Test-Email.com / 1234 ERROR: Email or password is incorrect	Test passed

Registration

Registration with registered user	jovic.stefan@gmx.net / 1234 ERROR: That email is already in use	Test passed
Registration with new credantials	test@emailtest.at / 1234 / 123 ERROR: Passwords do not match	Test passed
Registration with new credantials	test@emailtest.at / 1234 / 123 ERROR: User registered	Test passed
All required files are proven	The from don't let you trough if you don't fill out all required fields	Test passed

Profile

Change Password	jovic.stefan@gmx.net / 1234 -> 123 ERROR: Successfully updated user profile	Test passed
Change Email	Jovic.stefan@gmx.net/ 1234 / -> jovic.stefan@gmx-test.net ERROR: Successfully updated user profile	Test passed
Change Email and Email exists	test@emailtest.at / 1234 / 123 ERROR: User registered	Test failed
All required files are proven and password must be entered	The from don't let you trough if you don't fill out all required fields and your password	Test passed

Authentification Token:

Getting JWT Token after successfully login	test@email-test.at / 1234 In chrome->inspect->application->coockies we can see there is an jwt Token	Test passed
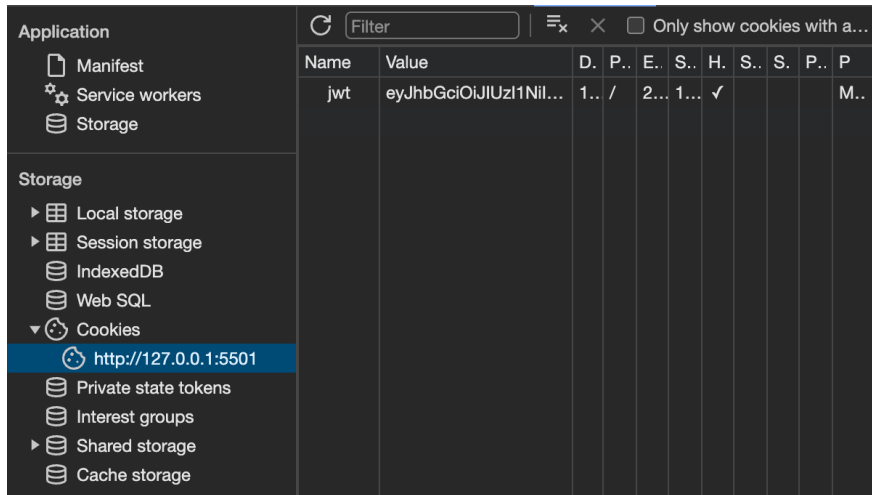

Authorization of Token

The authorization of the providet jwt-token is needet, to provide only persons with the valid token the access to the profile page, where the user can change his profile information (userEmail, user,Name, userPassword).

After login, the user gets a jwt-token which contains userId. After encrypting, the decoded token contains the userId in this case 11.

```
[nodemon] restarting due to changes...
[nodemon] starting `node app.js`
Server started on Port 5501
Connected to database
Token:  eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpZCI6MTEsImlhdCI6MTcwNzI1MDkxMCwiZXhwIjoxNzA3ODU1NzEwfQ.IUSzi
coEWSFYGLexgyCW9zTW_JDWZO18pdxnlokr8Bg
User: { id: 11, iat: 1707250910, exp: 1707855710 }
Token verified
get userData
11
{ userName: 'Stefan Test ', userEmail: 'test@email-test.at' }
```

After deleting the token from the coockies, the access to the profile page will be denied. The user can navigate in the dashboard, but if he navigates to the profile page, he will be redirected to the /login page.

Select multiple genres and delete them at once

Here we can see that I have selected first genre with id 27 at position 0 and then I selected the genre 14 on position 1.
